

STEP 1 — Install Docker Desktop for Apple Silicon (M1/M2)

✓ **Download (Apple Silicon version):**

<https://www.docker.com/products/docker-desktop/>

Click:

Download → Mac with Apple Silicon

✓ **Install it:**

- Open the downloaded `.dmg`
- Drag **Docker.app** → **Applications**
- Open Docker (top-right whale icon)
- When it asks for permissions → Allow

 **Important:**

Wait until Docker says:

“Docker Desktop is running”

STEP 2 — Pull the Oracle 23ai (ARM) Database Image

Oracle provides ARM-compatible images.

Run this in Terminal:

```
docker pull gvenzl/oracle-free:23-arm64
```

- ✓ This version works on M1/M2
 - ✓ It is Oracle 23ai
 - ✓ PL/SQL supported
 - ✓ HR schema can be added easily
-

STEP 3 — Start the Oracle Database Container

Run this:

```
docker run -d \  
  --name oracle23 \  
  -p 1521:1521 \  
  -p 5500:5500 \  
  -e ORACLE_PASSWORD=Oracle123 \  
  gvenz1/oracle-free:23-arm64
```

This does 3 things:

Component	Purpose
<code>--name oracle23</code>	Container name
<code>1521:1521</code>	SQL Developer / SQL*Plus connection
<code>5500:5500</code>	EM Express UI
<code>ORACLE_PASSWORD</code>	Password for SYS/SYSTEM/HR

STEP 4 — Wait for Database to Start

Check logs:

```
docker logs -f oracle23
```

Wait until you see:

```
DATABASE IS READY TO USE!
```

Then press **Ctrl + C**.

STEP 5 — Connect Using SQL*Plus Inside Container (Optional)

```
docker exec -it oracle23 sqlplus system/Oracle123@localhost:1521/FREE
```

or for SYS:

```
docker exec -it oracle23 sqlplus sys/Oracle123@localhost:1521/FREE as  
sysdba
```

STEP 6 — (Optional) Install HR Schema

The HR schema is not included by default, but easy to install.

Download sample schemas:

<https://github.com/oracle/db-sample-schemas>

Then run inside container:

```
docker cp db-sample-schemas oracle23:/opt/
```

Then:

```
docker exec -it oracle23 bash
```

```
cd /opt/db-sample-schemas
./install.sh
```

This installs **HR**, **SH**, etc.

If you want, I can write the EXACT HR installation command for you.

STEP 7 — Connect Using SQL Developer (GUI)

Download SQL Developer (Apple Silicon):

<https://www.oracle.com/database/sqldeveloper/>

Connection settings:

Field	Value
Host	localhost
Port	1521
Service Name	FREE
Username	HR / SYSTEM / SYS
Password	Oracle123

Click **Connect** → You're done.

STEP 8 — Stop / Start Database Anytime

Stop:

```
docker stop oracle23
```

Start:

```
docker start oracle23
```

Remove completely:

```
docker rm -f oracle23
```
